NOTES

STEM RAIL

STEM RAIL #507

CURVED MOULDINGS

Curved mouldings are available in most of Arvid's 1,300 profiles.

Curved mouldings are available in medium density fiberboard (MDF), in exterior fiber-board, and in solid wood.

MDF mouldings are paint grade. Single piece mouldings can be made to a 72" diameter. Material flexibility allows for some adjustments.

Solid wood curved mouldings are available in a variety of solid woods. Arches are made in 2 to 5 pieces depending on size and are assembled on site.
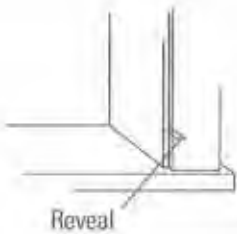

Laminated curved mouldings and arched liners are also available.

MEASURING FOR CURVED MOULDINGS AND ARCHES

A + B = C
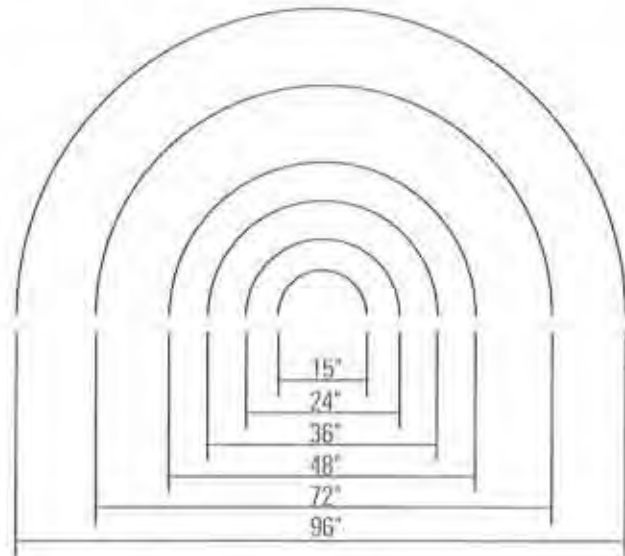

A= finished window opening diameter (incl. window liner).

B= Reveal (1/8" to 3/8" per side)
Reveal

C= Inside arch diameter.

To insure a proper fit, make a template of the finished or rough opening.

Please call for pricing information.

CHAIR RAILS

Chair rails decoratively separate the lower part of a wall from the upper part. Functionally chair rails protect the wall. Chair rails are usually placed 30" to 48" above floor. Other mouldings that are used as chair rails include cornice trims, caps, and symmetrical mouldings. (See illustration on page 29).

CAPS

Caps are used to finish the top of wainscoting, on panel edges, to build picture frame panels, and as a component in built-up crowns.
